Madrid, December 9th 2025

Dear Members of the Nominating Committee,

I wish to express my interest in serving on the Nominating Committee of the European Society of Cardiology. My involvement in the ESC through clinical, scientific, and educational activities has reinforced my commitment to the Society's mission and its role as the leading voice in cardiovascular medicine. I consider the work of the Nominating Committee essential to ensuring strong, transparent, and future-oriented governance, and I would be honoured to contribute to this responsibility..

My motivation to join the Committee is grounded in a firm belief that leadership selection must be rigorous, equitable, and aligned with the strategic priorities of the ESC. The Board's composition influences not only scientific direction and educational initiatives, but also the Society's credibility, policy engagement, and capacity to represent the diverse cardiovascular community. I would therefore bring to the Committee a strong focus on identifying candidates with proven scientific excellence, collaborative leadership, and an ability to represent the breadth of our community—professionally, geographically, culturally, and generationally.

I also aim to contribute to strengthening the ESC's commitment to diversity and equity. As the cardiovascular landscape evolves, the Board must reflect a multidisciplinary, gender-balanced, and geographically inclusive community. My previous work in international networks, training programmes, and multicentre collaborations has given me firsthand experience with the strengths and challenges of building diverse teams. I would apply this experience to ensure a balanced, merit-based, and forward-looking selection process.

Finally, I believe the Nominating Committee must anticipate the future needs of cardiovascular medicine. This includes leadership with expertise in digital health, data science, prevention, imaging, interventional therapies, heart failure, and the redefinition of training pathways. Identifying individuals who can bridge scientific innovation and clinical care is crucial, and I am committed to recognising such profiles and supporting their integration into ESC leadership.

Thank you very much for considering my application.

Yours sincerely,

Esther Pérez David, MD, PhD
