

Dear all,

I am writing to apply for a role as a nucleus industry member within the Cardiovascular Round Table (CRT). As a physician with deep experience in cardiorenalmetabolic health, I am motivated by CRT's unique ability to convene clinical and industry leaders around a shared goal: accelerating practical, evidence-based improvements in cardiorenalmetabolic outcomes across Europe.

Over more than 20 years in the pharmaceutical industry, I have held positions across Research & Development and Medical, partnering closely with internal teams and external stakeholders. This work has strengthened my understanding of the full lifecycle of cardiorenalmetabolic innovation (like SGLT2-I, nsMRA, GLP1-RA)—evidence generation, clinical development, medical strategy, and implementation in real-world care—and reinforced my conviction that prevention, early detection, and cross-sector collaboration are essential to improving patient outcomes at scale.

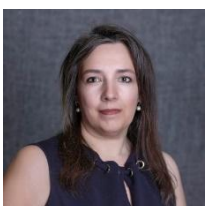

CRT's objective of strengthening the partnership between the European Society of Cardiology (ESC) and responsible industry stakeholders particularly resonates with me. I would contribute by connecting people, aligning perspectives, and helping translate dialogue into tangible initiatives. I am prepared to participate actively in meetings, contribute constructively to committee discussions, and support special assignments that benefit from my scientific and medical background. In addition, as an active LinkedIn user, I can help amplify key CRT messages and initiatives to encourage engagement from a broader professional community.

I would welcome the opportunity to work with the Chairs and ESC staff to advance CRT's strategic priorities and deliver measurable impact. I bring a collaborative, solution-oriented approach and a strong commitment to scientific integrity and patient benefit—qualities I believe are essential for CRT's work at the interface of clinical practice, policy, and innovation.

Thank you for considering my application. I would be pleased to discuss how my experience and network could support CRT's work, and I look forward to the possibility of contributing to the future of cardiorenalmetabolic health in Europe.

Warm regards,

Katja Rohwedder
